More than half of double-vaccinated blood cancer patients have been left with little protection against COVID-19, new research has found.

Data from the SOAP-02 trial, published today in a [letter](#) to *Cancer Cell*, examines the level of immune protection following the delayed Pfizer vaccine boost in 159 participants, 128 of whom were [cancer](#) patients. Although administering the second dose increased rates of seroconversion (development of antibodies to SARS-CoV-2) in blood cancer patients from
