

Germany latest country to pass 100,000 deaths from COVID-19

November 25 2021, by Frank Jordans

A hotel has switched on the lights in some rooms to form a heart near the buildings of the banking district in Frankfurt, Germany, Dec. 10, 2020, as the German government discusses further restrictions to avoid the outspread of the coronavirus. Germany is set to mark 100,000 deaths from COVID-19 this week, passing a somber milestone that several of its neighbors crossed months ago but which some in Western Europe's most populous nation had hoped to avoid.

Official figures released Thursday show Germany has become the latest country to surpass 100,000 deaths from COVID-19 since the pandemic began.

Germany's disease control agency said it recorded 351 additional deaths in connection with the coronavirus over the past 24 hours, taking the total toll to 100,119.

In Europe, Germany is the fifth country to pass that mark, after Russia, the United Kingdom, Italy and France.

The Robert Koch Institute, a federal agency that collects data from some 400 regional health offices, said Germany also set a record for daily confirmed cases—75,961 in a 24-hour period. Since the start of the outbreak, Germany has had more than 5.57 million confirmed cases of COVID-19.

The surge in cases prompted Germany's government-in-waiting on Wednesday to announce the creation of a new permanent expert group to advise officials on how to tackle the pandemic.

While the number of daily infections is higher than that seen during the last winter surge, there are currently fewer daily deaths per confirmed case. Experts argue this is because of vaccinations, which they say reduces the likelihood of serious illness.

Still, hospitals have warned that intensive care beds are running out, with almost 4,000 already occupied by COVID-19 patients. Some hospitals in the country's south and east have begun transferring patients to other regions.

The general manager of the Bavarian hospitals association, Roland Engehausen, said the number of new cases needs to come down sharply.

"Otherwise we're going to have a dramatic situation between Christmas and New Year's the likes of which we haven't seen yet," he told German news agency dpa.

Saxony, to the northeast, became the first German state to record a weekly number of confirmed cases above 1,000 per 100,000 inhabitants Thursday. It has the lowest vaccination rate—at 57.9%—among Germany's 16 states.

The government has urged people who were vaccinated more than six months ago to get boosters, and those who haven't been inoculated at all yet to get their first shot. Officials say 68.1% of Germany's 83 million inhabitants are fully vaccinated, far below the minimum level of 75% the government has aimed for.

Center-left leader Olaf Scholz, who is poised to succeed Angela Merkel as chancellor next month, called Wednesday for mandatory vaccinations in nursing homes that care for particularly vulnerable people—and left open the possibility of extending the measure to others.

"Vaccinations are the way out of this pandemic," Scholz said.

His Social Democratic Party's health expert Karl Lauterbach, a trained epidemiologist, cited the case of Bayern Munich soccer star Joshua Kimmich as a cautionary tale for those who believe they can avoid both the virus and the vaccine. Kimmich, who had hesitated to get the shot, tested positive this week. Bayern said Wednesday that Kimmich was "doing well."

"The case shows how difficult it is for unvaccinated people to avoid

COVID these days," Lauterbach said on Twitter.
