

Rich countries getting new COVID vaccine before poorer ones

March 24 2022, by Maria Cheng and Aniruddha Ghosal

The company behind a COVID-19 vaccine touted as a key tool for the developing world has sent tens of millions of doses to wealthy nations but provided none yet to the U.N.-backed effort to supply poorer countries, a sign that inequity persists in the global response to the pandemic.

A quarter-million doses from the company were supposed to be available to the vaccine-sharing initiative, called COVAX, by March. But the U.N. agency in charge of deliveries says the first shipments now likely won't be made until April or May.

It wasn't supposed to be this way. The company, Novavax, got \$388 million from one of the organizations leading COVAX to fast-track the vaccine's development and help make the shot available in poorer countries.

The investment guaranteed COVAX the "right of first refusal" to the first Novavax doses, but the deal applied only to factories in the Czech Republic, South Korea and Spain, said Bjorg Dystvold Nilsson, spokesman for COVAX co-founder CEPI.

There are other factories that aren't part of the deal—and their shots are going elsewhere.

The Serum Institute of India, the world's largest vaccine maker, has manufactured millions of Novavax doses. According to India's Ministry of External Affairs and the institute, more than 28.9 million of those doses were sent to the Netherlands in January and February, while Australia received about 6 million doses. Indonesia also received about 9 million doses in December.

Thousands of other Novavax doses were also shipped from a Netherlands factory to other EU countries.

"Whatever the reason, a vaccine that was believed to be highly suitable for poor countries is now in large part going to rich countries," said Zain Rizvi, a drug policy expert at the U.S. advocacy group Public Citizen. "It's tragic that in year three of the pandemic, we still cannot get the resources, attention and political will to solve vaccine inequity."

The delay is the latest setback for COVAX, which has been repeatedly hit by supply problems and has [missed numerous targets](#) to share doses.

Last year, WHO's director-general Tedros Adhanom Ghebreyesus decried the chasm in vaccine supplies between rich and poor countries as a "catastrophic moral failure."

Vaccine availability has been improving in poorer regions recently, but logistical problems persist.

According to data from Oxford University, only about 14% of people in low-income countries have received at least one dose of COVID-19 vaccine. More than 680 million doses of COVAX-provided vaccines remain unused or have expired, according to government data.

Even with vaccine supplies improving, some officials were eagerly awaiting the Novavax vaccine in particular because it is easier to transport and store than some other coronavirus shots. They also hoped it might be more enticing to people skeptical of the AstraZeneca vaccine, which suffered through a botched rollout in Europe.

Countries including Zimbabwe, the Central African Republic and Kiribati were among those in line to be offered Novavax doses by March from COVAX.

Before the pandemic, Novavax was a small American company that had never brought any vaccine to market. Its shots have proven highly effective, but it is relying heavily on other companies to make them.

The company, struggling to scale up production, also has delayed delivery to other countries, including some in the European Union. COVAX is supposed to receive more than 1 billion Novavax doses.

Employees pack boxes containing vials of Covishield, a version of the AstraZeneca vaccine, at the Serum Institute of India in Pune on Monday, Nov. 22, 2021. The Serum Institute of India, the world's largest vaccine maker, has manufactured millions of Novavax doses, but none went to COVAX. In a statement, the Gaithersburg, Maryland, company acknowledged that it had yet to share any shots with the vaccines alliance Gavi, which fronts the COVAX effort, but said it stands ready to do so.

"We continue to work with Gavi to reach our shared goal of ensuring global access to our protein-based vaccine where it is needed most," Novavax said.

Gavi suggested part of the delay is that the Novavax vaccine wasn't authorized by WHO until December. Gavi said it planned to allocate Novavax in the future and was "in close touch with the manufacturer and expects the supply to be available for delivery when countries need it."

Health officials also worry that the urgency to vaccinate people everywhere against COVID-19 has disappeared—especially as many countries roll back precautions and the world's attention is diverted.

"Rich countries have moved on from COVID and everyone is fixated on the war in Ukraine, but COVID-19 remains an acute crisis for most people in the world," said Ritu Sharma, a vice-president at the charity CARE.

She said COVAX was still desperately short of vaccines and that based on the current pace of vaccination, the world was still "years and years" away from immunizing enough people to stop future COVID-19 waves.

Other experts said it was incumbent on public health agencies to ensure their investments into vaccines would benefit poor countries and to be more transparent about what went wrong.

"Whatever the explanation is, it's unsatisfactory," said Brook Baker, an access to medicines specialist at Northeastern University. "The bottom line is that there are still a lot of unvaccinated people in poor countries and once again, they are at the back of the line."
