

Low concentrations of a specific metabolite in diabetics may explain why they are more susceptible to COVID symptoms

May 20 2022, by Bob Yirka

Screening of human serum metabolites against SARS-CoV-2 infection. a,b, Roles of human serum metabolites in SARS-CoV-2 infection. Schematic diagram of the study design (a). Incubation with human serum-derived filtrates impaired SARS-CoV-2 replication (b). Negative control: cells incubated with cell medium without SARS-CoV-2 infection. For the upper liquid group and lower liquid group, each dot represents one donor (n = 8 healthy donors). P =

0.0001 for upper liquid versus lower liquid, P
