

# Not just for glasses: Eye exams could save your life

October 18 2022

---

Eyes may be your window to good health.

Patient Barbara Krupar, a 65-year-old Ohio retiree, learned this firsthand.

Krupar made an appointment with her ophthalmologist after experiencing disturbing vision changes.

Dr. Nicole Bajic detected possible early warning signs of a stroke. She advised Krupar to go to the emergency room immediately to have her head and neck imaged.

At the hospital, the ER physician discovered that the [carotid artery](#) in her neck was 85% blocked, putting Krupar at imminent risk of suffering a stroke. The eye exam may have saved her life.

Exams can give view to some [serious health conditions](#) a person may be experiencing, including [heart disease](#), diabetes, cancer, [high blood pressure](#), multiple sclerosis, autoimmune diseases, sexually transmitted diseases and Alzheimer's.

These [serious ailments](#) can be detected in the eye because its [blood vessels](#) and nerves are reflective of the state of the rest of the body, according to the American Academy of Ophthalmology.

"Barbara's experience really highlights the importance of getting an annual eye exam," said Bajic, an ophthalmologist at the Cleveland Clinic and clinical spokeswoman for the American Academy of Ophthalmology.

"The best care is preventative care," Bajic said in an academy news release. "It's like getting your teeth examined every year. You want to see if something else is brewing."

The academy also offered advice for maintaining healthy vision and

overall [good health](#).

A heart-healthy diet full of leafy greens and colorful fruits is good for the eyes, the academy said. Foods rich in vitamins C and E, zinc, lutein, zeaxanthin and omega-3 fatty acids can lower risk of certain eye diseases, including [macular degeneration](#), [cataracts](#) and [dry eye](#).

Getting regular exercise can protect eye health, as well. The American Heart Association recommends 30 minutes of exercise a day.

Know your [family history](#), including whether family members had macular degeneration and [glaucoma](#). Share that information with your ophthalmologist.

Don't skip [routine eye exams](#). Have a comprehensive eye examination by age 40 even if your vision seems fine. After age 65, get an exam every year or two.

The American Academy of Ophthalmology's EyeCare America program matches volunteer ophthalmologists with eligible patients in need of eye care across the United States.

Some seniors may be eligible for a free [eye exam](#). They can visit [EyeCare America](#) online to check eligibility.
