

Slam dunk contest scoring methods could still be improved, a dunkologist explains

February 24 2023, by Justin Barber

I grew up watching some of the greatest slam dunk artists in the world.

[Shawn Kemp](#) was one of my favorites because he was freaky athletic and dunked so powerfully. Plus, he seemed so nonchalant about everything. It made [his dunks](#) look effortless.

[Dominique Wilkins](#) just jumped [so high on every dunk](#). His limbs are long and he would [windmill the ball](#) so far around and then dunk hard on the rim like a sledgehammer.

[Kenny "Sky" Walker](#) was my biggest inspiration, because I felt as if we jumped alike, and he did a lot of [360s](#). He swung and whirled the ball about, kicking his legs and dunking aggressively. That's why I liked doing those 360s on a 6-foot-high rim back in the 1990s when I was in elementary school.

I also drew inspiration from my dad. One day my dad and I were shooting baskets with a volleyball. I begged him to dunk it. Even though he was exhausted from a day of construction work, he dunked it hard, all his limbs outstretched. The impact ripped open his finger and he began to bleed. Despite the injury, I was just in awe that he had dunked the ball. I thought the whole thing was so cool.

Today, my fondness for dunking remains, but on a much higher plane. I study dunks, so that makes me a [dunk scientist](#). Or you might say I'm a dunkologist.

So whenever I watch the NBA's annual [slam dunk](#) contest—like the one that [Philadelphia 76ers' Mac McClung won](#) with a [turnaround slam on Feb. 18, 2023](#)—I don't watch just to be entertained. As chairman of the technical committee for the [World Dunk Association](#)—a group formed in 2020 to build more appreciation for the slam dunk—I also look to improve upon a [new system](#) we have developed offering a more

scientific approach toward how judges score slam dunks.

Growing up, I remember seeing "style, athleticism and creativity" mentioned during NBA broadcasts as factors for slam dunk judges to consider. But it wasn't until I embarked upon my journey to become a researcher that I began to wonder if the slam dunk judges might be using more sophisticated criteria.

As my colleague Evan Rollins and I wrote in a [peer-reviewed paper](#) published in 2019 in the [Journal of Sports Analytics](#), dunk scores—[now given on a scale of 6 to 10](#)—are not always awarded as fairly and consistently as you might hope or expect.

How dunks get scored

I created a database to capture data from [every dunk I could find](#) for contests going all the way back to 1984. As of February 2022, the database contains information on more than 700 dunks.

Only about 45% of a player's dunk score is based on what they do with their body or the ball, our analysis found. We found about 28% of a dunker's score is based on factors that have nothing to do with the actual dunk, such as whether or not the contest took place in the hometown of the dunker or the dunker's team. When a dunker's team or hometown hosted the contest, their dunks were often scored higher than they would have been if the contest were held somewhere else.

Other factors included the player's popularity—as measured by the number of mentions in the media. But a player's popularity is often based on the player's skill, so we don't know if player popularity is a cause of—or simply correlated with—scoring high on a slam dunk.

The influence of non-dunk-related factors made me want to discover

new methods to judge and score slam dunks. My pursuit led me to the World Dunk Association, which was started in 2020 by [Kadour Ziani](#), a retired professional dunker, and [Damian Le Nouaille-Diez](#), a software engineer, author and entrepreneur. Turns out Kadour and Damian had devised a [system to classify dunks](#) that was very much like the one Evans and I published in 2019.

As our association continues to work on [new and better ways](#) to enable judges—and the [general public](#)—to score dunks, here are five things to keep in mind whenever you watch a slam dunk contest.

1. Disregard things that are not part of the actual dunk

Be careful of theatrics such as [singing choirs](#), [clever passes from a teammate](#), [changing jerseys](#) and [other features](#) that do not meaningfully alter how the dunker executes ball movements and body actions.

[Jumping over a celebrity](#) is no different from jumping over an ordinary person of the same height. All these activities are exciting and entertaining, but they do not reflect what the dunker actually does.

2. Flight: Elevation, distance and obstacles

Flight involves how high the dunker jumps, how far they jump and—if they jump over something—the size of an obstacle they jump over.

A simple way to check how high the dunker jumps is by looking for the highest point of their head relative to the bottom of the net and basket. This is easier than checking distance between the hips and the floor, because the dunk happens so quickly and jerseys can make it hard to visually locate the hip.

Distance is simply how far the point of takeoff is from the basket.

[Jumping over obstacles is impressive](#) because it makes all other parts of the dunk more difficult. However, always check whether the dunker [pushes off the obstacle](#) while jumping over it because pushing up increases the upward force and, when done properly, will allow them to elevate higher than they are truly able to jump.

3. Style: Watching what is done in the air

Once airborne, dunkers perform tricks with the ball and [gymnastics](#) with their bodies.

Watch for whether their overall bodily movements are smooth and extended or jerky and abbreviated. Fully outstretching arms and extended, smoother movements demand greater strength and flexibility to maintain control of the ball and body while airborne. If a dunker has trouble maintaining control of the ball and their body in the air, the arms and legs will be less extended and movements will be abbreviated.

4. Power: Watching the finish

Watch for a powerful and clean finish in which the ball is dunked at a high velocity without bumping the rim. On more [powerful dunks](#) there will also be greater movement of the net side to side or upward out of the basket.

5. Innovation: Enjoy it

Dunkers can invent new [ball movements](#) and introduce never-before-seen [variations](#). Sometimes they dream up entertaining ways to showcase their abilities, such as [slapping a sticker high on the backboard](#), [grabbing a stuffed animal hanging](#) from the rim with their mouth or [blowing out a lit birthday candle](#) that is on the rim as part of the dunk.

Whereas the 2022 slam dunk contest has been called "[the weakest ever](#)," some, such as Shaquille O'Neal, are saying that Mac McClung may have "[saved the contest](#)" in 2023.

Indeed, McClung dazzled—but he was not alone. The other contestants—Trey Murphy III, Jericho Sims and Kenyon Martin Jr.—put on a show as well, performing athletically demanding dunks. Notably, 10 of the 12 total dunks in 2023 were made on the first try, far greater than four of 12 in 2022. Although McClung won with an [array of amazing dunks](#), Murphy's [180 two-handed tomahawk-to-windmill](#) with a reverse finish should not be overlooked.

My favorite dunks are the ones—just like the ones I used to watch as a kid—that inspire me to go to the court and create my own.
