New antibody shows strong potential as treatment against pancreatic cancer

October 27 2023

SIWA318H treatment depletes p\textsuperscript{16INK4a} positive cells and reduces αSMA expression in PSN1 xenograft tumors. (A) Quantification of the number of p\textsuperscript{16INK4a} positive cells in isotype control antibody treated and SIWA318H treated tumors. (B) Quantification of αSMA positive areas in isotype control antibody treated and SIWA318H treated tumors. (C) A representative image of tumor tissues from mice treated with isotype control antibody stained with antibodies against p\textsuperscript{16INK4a} (Brown) and αSMA (Teal). (D) A representative image of tumor tissues from mice treated with low dose SIWA318H stained with antibodies against p\textsuperscript{16INK4a} (Brown) and αSMA (Teal). Scale bar in (C) and (D) = 50 μm. **, p
