

The rising health crisis of congenital syphilis: What physicians can do

December 4 2023, by Tricia Tomiyoshi

Clinical features of perinatal syphilis and risk of maternal-to-fetal transmission. Primary syphilis (painless skin lesions/chancre or regional lymphadenopathy)

and secondary syphilis (flu-like syndrome, maculopapular rash, and skin lesions known as condyloma lata) are associated with 60–100% transmission of infection to the fetus. Latent syphilis with disappearance of symptoms is associated with
