

Mechanical thrombectomy safe, effective for high-risk pulmonary embolism

December 10 2023, by Lori Solomon

Mechanical thrombectomy (MT) is safe and effective in real-world, high-risk patients with pulmonary embolism (PE), according to a study published online Oct. 31 in the *Journal of the Society for Cardiovascular*

Angiography & Interventions.

James M. Horowitz, M.D., from the NYU Grossman School of Medicine in New York City, and colleagues assessed the safety and effectiveness of MT for high-risk PE. The analysis included 63 real-world, [high-risk patients](#) identified through the multicenter FlowTrier All-comer Registry for Patient Safety and Hemodynamics study.

The researchers found that 47.6 percent of patients showed a systolic blood pressure
