Ethiopia urban

Authors' analysis of data from the Gender and Adolescence: Global Evidence (GAGE) program. NOTES The difference-in-differences regression specification is in equation 1 in the methods appendix (see note 23 in text). "Household vulnerability" is defined in the text. The sample populations in each country are defined in the text and the exhibit 1 notes, along with specific data collection periods (COVID-R1 and COVID-R2) for each country. The number of hours spent studying was transformed to share of day spent studying to match the scale of other outcomes. \*p
