

Newly identified biomarker could lead to simple blood test for rare autoimmune disease

January 16 2024, by Gillian Rutherford

(a) Schematic workflow for the label free proteomic analysis of serum collected from 6 MG patients, 6 control individuals and 6 with the related disease,

Rheumatoid Arthritis (RA). (b) Venn diagram summarizing the proteins identified and quantified among the three test groups. (c) A three-way triplot of differential protein abundance observed between MG, control and RA samples. (d) Heatmap representation of the abundance of statistically significant proteins with their respective calculated ANOVA F-statistic shown (p
