

ACC: Empagliflozin cuts heart failure hospitalization risk after AMI

April 8 2024, by Elana Gotkine

For patients with acute myocardial infarction at risk for heart failure, empagliflozin reduces the risk for heart failure hospitalization, according to a study published online April 6 in *Circulation* to coincide with the annual meeting of the American College of Cardiology, held from April

6 to 8 in Atlanta.

Adrian Hernandez, M.D., from Duke University in Durham, North Carolina, and colleagues examined the impact of empagliflozin on first and recurrent [heart failure](#) events in patients after myocardial infarction in a double-blind, randomized trial. The study included 6,522 patients hospitalized for [acute myocardial infarction](#) at risk for heart failure based on newly developed left ventricular ejection fraction of
