A new study found that Black Americans trail white Americans when it comes to financial stability in midlife, which may impact brain health in old age.

Having—or lacking—[financial stability](#), especially for older Black Americans, can significantly impact health and cognitive function, according to a new study led by Chioun Lee, a University of California, Riverside associate professor of sociology.

The [study](#), "Racial Disparities in Cognitive Health Among Older Americans: The Role of Debt–Asset Profiles During Preretirement Age" was published in *The Journals of Gerontology, Series B: Psychological Sciences and Social Sciences*
