Prenatal Zika infection in mothers found to have long-term immune consequences in children, even without microcephaly

July 18 2024

Chronic inflammation in two-year-old ZE children. (a) Schematic representation of serum proteome multiplexing of two-year-old healthy (non-ZE, n = 24) or ZE children with normal (n = 15) or abnormal (n = 5) neurodevelopment. (b) t-SNE plot of serum proteomic profiles of two-year-old healthy (n = 7) and ZEC (n = 20). (c and d) Venn diagram (c) comparing significantly altered serum cytokines (P
