

Domperidone tied to modest increase in breast milk supply

5 March 2018

(HealthDay)—Domperidone is well tolerated and effective in producing a moderate short-term increase in expressed breast milk volume among mothers of preterm infants, according to a review published online Feb. 22 in *BJOG: An International Journal of Obstetrics and Gynaecology*.

Luke E. Grzeskowiak, Ph.D., from the University of Adelaide in Australia, and colleagues conducted a literature review to identify [randomized controlled trials](#) that compared domperidone with placebo in [mothers](#) of preterm infants (
