

# When is sexting associated with psychological distress among young adults?

23 April 2019

"Sexts" was coauthored by Bianca Klettke and colleagues from Deakin University (Victoria, Australia). The researchers found that receiving unwanted texts and [sexting](#) under coercion was also associated with lower self-esteem. Furthermore, males receiving unwanted sexts had poorer mental health outcomes.

"With more of our lives playing out online, sexting and other seemingly private communications may be contributing to an indelible digital footprint. Digital sex is a much-needed topic in today's sexual education programs to ensure responsible use of technologies," says Editor-in-Chief Brenda K. Wiederhold, Ph.D., MBA, BCB, BCN, Interactive Media Institute (San Diego, California) and Virtual Reality Medical Institute (Brussels, Belgium).
