

Michigan halts sale of marijuana vape products, orders tests

22 November 2019

Michigan has temporarily halted the sale of marijuana products intended for vaping so that they can be tested for a compound linked to lung illnesses.

The Marijuana Regulatory Agency issued the emergency rules Friday.

They prohibit licensed medical and recreational marijuana businesses from selling existing products intended for [e-cigarette use](#) unless they are re-tested and do not have vitamin E acetate. Newly made vaping products cannot have the compound, either.

Regulators plan to inspect processing facilities twice a month to make sure they do not contain inactive ingredients that are not approved by the U.S. Food and Drug Administration for inhalation.

Vitamin E acetate has only recently been used as a thickener in vaping fluid, particularly in [black market](#) vaping cartridges.
