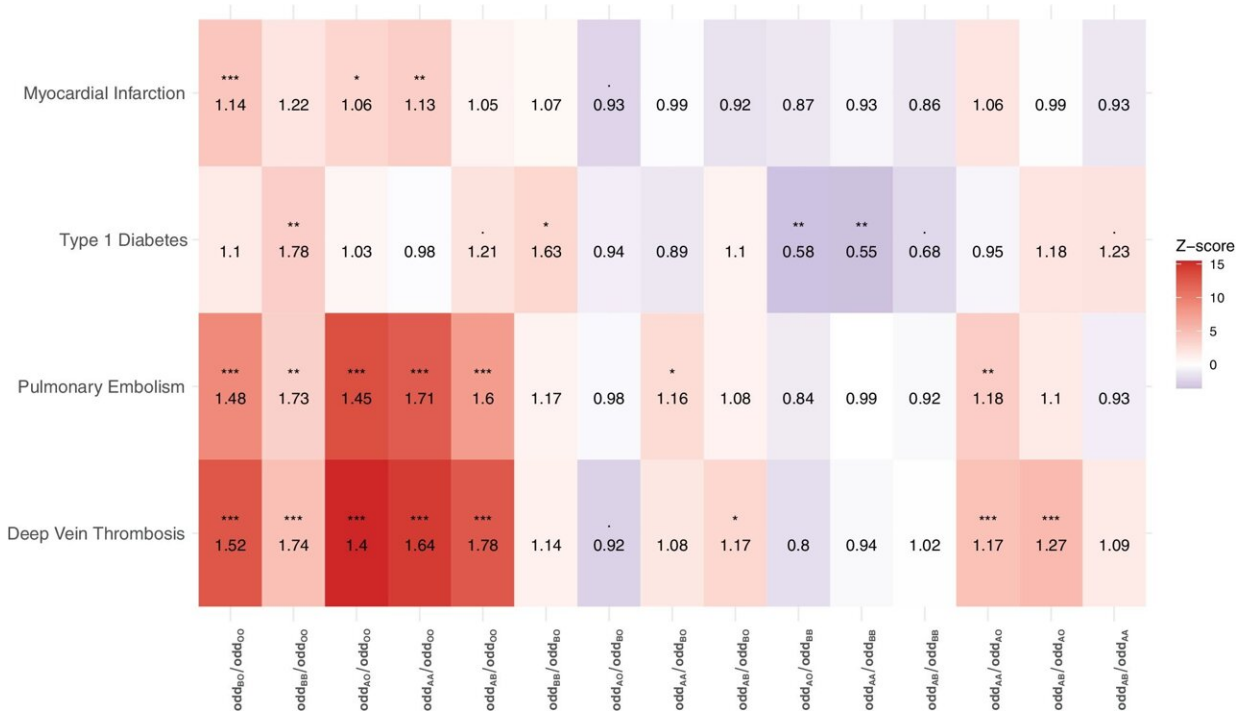
Genetic test better than blood test for cardiovascular diseases

August 30 2021



Results from the regression analysis for all diseases where ABO contributed significantly to the association. Based on the full UKB cohort. All diseases are stated on the y axis, the ABO genotype comparison is stated on the x axis with their respective ratio. For visualization purposes, the diseases have been clustered with hierarchical clustering by their respective odds ratios. Odds ratios for each disease and ABO genotype comparison are shown within each square. Squares are colored by Z-score, where blue depicts a negative Z-score and red a positive Z-score. Significance thresholds correspond to: p
