Feds warn of home carbon monoxide detectors that may fail to alarm
23 September 2022

Consumers should immediately stop using HECOPRO digital display carbon monoxide (CO) detectors because they can fail to warn about the presence of the dangerous gas, the U.S. Consumer Product Safety Commission (CPSC) said.

The CPSC issued the warning Thursday after detectors sold on Amazon.com failed tests with a CO concentration of 400 ppm, in violation of safety standards. At sustained levels above 150 to 200 ppm, disorientation, loss of consciousness, and death are possible, according to the CPSC.

The detectors in the warning were sold on Amazon.com under ASIN, B07T66J7KJ for between $9 and $13. They are made of white plastic and measure approximately 4.1 by 1.8 by 4.1 inches. They have a digital display. Advertising for the detectors claims they detect dangerous levels of carbon monoxide and alert with a flashing red LED and a loud alarm.

Accidental carbon monoxide poisoning associated with consumer products claims more than 150 lives in the United States each year.
